Experience

Apache Fineract (Apache Software Foundation)

Jan 2026 – Present

Open Source Backend Contributor

Remote

- Engineered a **currency-aware charge rounding feature** in **Java** that ensures consistent financial charge processing across **4 core banking modules (Loan, Savings, Share, and Client)** by integrating Fineract's **Money** abstraction, applying configured currency precision and denomination rules, and preventing zero-value charges.
- Designed and developed a **regression test suite** comprising **45 integration tests** across **4 financial modules (Loan, Savings, Share, and Client)** using generated **Fineract API Clients**, **REST Assured**, and **JUnit** to validate charge rounding, REST API behavior, and critical business workflows.
- Identified and resolved **backend defects** by correcting **Search API** entity mappings, enforcing **HTTP 400** validation, and aligning **OpenAPI** documentation with backend validation, improving API correctness and validation consistency.
- Streamlined integration testing by migrating existing tests from the Fineract API Client to the **Feign Client**, improving test maintainability and contributing to faster test execution and CI feedback.
- Collaborated with **Apache Fineract maintainers** through technical discussions and iterative code reviews, resulting in **6 merged pull requests** across backend features, automated testing, API enhancements, and developer documentation.

Projects

Ecommerce Platform

- Backend API** [Link] Java | Spring Boot | Spring Security | PostgreSQL | Stripe | JUnit | Mockito
 - Built a **layered REST API backend** for the Ecommerce Platform using **Java**, **Spring Boot**, **Spring Data JPA**, and **PostgreSQL** to support authentication, product catalog, cart, order, and payment workflows.
 - Secured **REST APIs** with stateless **JWT authentication** and **role-based authorization** using **Spring Security**.
 - Designed **transactional order processing** for cart and payment validation, inventory updates, and order persistence.
 - Integrated **Stripe Payment Intents** to securely process payments and validate transactions before order creation.
 - Developed **350+ automated unit and integration tests** using **JUnit 5**, **Mockito**, and **MockMvc** to improve maintainability and prevent regressions.
- Frontend Client** [Link] React | Redux Toolkit | React Router | Axios | Tailwind CSS | Material UI
 - Built a frontend client for the Ecommerce Platform using **React**, **React Router**, and **Axios** to consume **Spring Boot REST APIs** and deliver an end-to-end shopping experience.
 - Integrated with the backend's **JWT-based authentication** using **React Router** and **localStorage** to provide session persistence, protected routes, and role-based UI access.
 - Centralized shared application state with **Redux Toolkit** for authentication, products, cart, checkout, and orders.

Skills

Languages: Java, SQL, JavaScript, C

Frameworks & Libraries: Spring Boot, React

Databases: PostgreSQL, MySQL

Testing: JUnit 5, Mockito, MockMvc, REST Assured

Developer Tools: Git, GitHub, Maven, Gradle, Docker, Postman, Jira

Core Concepts: Object-Oriented Programming, Data Structures & Algorithms, REST APIs, Authentication & Authorization

Operating Systems: Linux (Ubuntu), Windows

Education

Shri Guru Gobind Singhji Institute of Engineering and Technology

Nanded, India

B.Tech. in Electronics and Telecommunication Engineering | CGPA: 8.60

Jul 2017 – Jun 2021

Coursework and Certifications

Spring Academy – Spring Framework & Spring Boot

Princeton Algorithms, Parts I & II – Coursera

Harvard CS50x – Introduction to Computer Science

Achievements

- Contributed **6 merged pull requests** to the **Apache Fineract** open-source project.
- Solved **150+ LeetCode** coding problems across data structures and algorithms.
